

RANSOMWARE WORKSHOP

Organizations need a more comprehensive approach to recovery from Ransomware. Today, many organizations believe they can successfully recover from Ransomware to discover that their backup data is compromised.

RANSOMWARE WORKSHOP SERVICE

Data Center and Cybersecurity experts from Presidio will lead a high-level discussion using industry best practices. We bring the stakeholders from multiple teams to discuss your organization's cybersecurity, data center, and recovery posture. We will lead a discussion to interview your team in a group setting. Our experts will help to find the gaps in your ransomware recovery capabilities. We will document our findings and create a vision document that provides proposals to improve your cyber recovery resilience.

RANSOMWARE FACTS

- 82% reported experiencing a disruptive event in the last 12 months (up from 76% in 2018). - Data Protection Index 2020
- World Economic Forum Global Risks Report 2019 ranks cyberattacks among the top five global risks. - World Economic Forum
- 54% increase in downtime costs from 2018 to 2019; it is taking organizations longer to recover from disruptive events. - Data Protection Index 2020
- 69% lack confidence that they will be able to recover all their data following a cyberattack. - Data Protection Index 2020
- In 75% of all ransomware incidents the attackers will delay encrypting their victims' systems to steal Domain Admin credentials. - FireEye

DELIVERABLE

Presidio will create a custom vision document that will highlight areas for improvement and options for the next steps to improve posture. This vision document recaps the current state and needs to be based on the findings of the workshop. It will outline at least three initiatives using SMART goals that the organization should take along with a proposed plan, reference architecture (if needed), and a list of deliverables agreed to in the workshop.

- Engagement Time: 2 - 4 Hours remote
- Deliverable Time: 1-2 weeks
- Cost: \$0

KEY BENEFITS

- A common ground for ransomware recovery
- A list of industry best practices that can be customized to meet the needs of any organization
- A complementary guideline for an organization's existing data recovery and risk management strategy
- A risk-based approach to identifying ransomware vulnerabilities
- A systematic way to prioritize and communicate cost-effective improvement activities among stakeholders
- A frame of reference on how an organization views managing data recovery risks
