

Delivering Full Spectrum IT Support with Structured Cabling

Network cables are an essential component of any communication systems – as they facilitate the exchange of information being transferred between devices and networks. By implementing a turnkey solution like structured cabling, federal agencies can easily manage and utilize their building's connectivity for applications and ultimately, reduce the risk of errors and network downtime.

Benefits of Structured Cabling:

- Greater performance
- Increased Flexibility

- Reduce costs
- Improve security
- Centralized, turn-key cabling
- Moves, Adds and Changes Streamlined
- Option for upgrades and redundancy

Presidio Federal is pleased to offer many customized structured cabling solutions, which include:

- Data center services
- Passive optical networks vs. legacy technologies
- Moves, Adds, and Changes
- Structured Cabling Design

Presidio Federal's purpose is to be your dominant provider of critical communications, technology, and security solutions to support your mission. We strive to achieve world-class standards in delivering quality, reliable, on-time, accurate and customized solutions, and services.

Our goal is to provide transparency throughout the entire experience. Our team of dedicated project manager experts have a simple 5-step process starting with the initial on-site survey and ending with testing, certification, and warranty of the hardware and materials – never forgetting the end goal of achieving the mission at hand.

Our experienced team will provide structured cabling support for our customers' mission from step A to Z – including with these services:

- Cable planning and engineering
- Cable installation
- Router and switch configuration
- Network testing
- Ongoing maintenance, surveillance, and support

"I have worked with Presidio Federal now for 7 years from SAN support to network install to Zoom VTC. I truly feel the team and support they have given has been phenomenal!"

- Department of Justice Senior Technologist

Smart Hands support is outsourcing the onsite management, installation and troubleshooting of your data center equipment to third-party IT professionals. These certified and skilled technicians and engineers work with your remote team to perform many tasks that require an IT expert on site.

With Smart Hands, you have access to our trained technicians, who can:

- Provide on-site technical assistance and troubleshooting
- Perform equipment installations
- Remove and install interface cards
- Test carrier circuits
- Take inventory of equipment, take digital photos, and record serial numbers
- Perform a power cycle on a router, server, or switch; soft boot a server
- Move equipment within your space and cabinets
- Install ladder racking, pre-wire patch panels and equipment
- Assemble, install, and maintain cabling
- Verify cable integrity on installed media
- Provide visual verifications
- Install, replace, or remove equipment (router, switch card, disk drive, memory, etc.)
- Assist with conference room and AV equipment setup
- Add, remove, or verify a demarcation
- Assist with unboxing of equipment or shipment of equipment
- Extend patch cables from the patch panel to the equipment
